

1. What do I want to learn or understand better? Consider e.g. teamwork, Scrum, agile processes, technologies etc?

Same as last week. I still want to learn typescript better. After programming this week I feel like I have learned a lot but it also became even more evident that I have a lot to learn. I feel like the backend side of typescript is alright but I'm completely lost in the frontend. This is something I want to learn more about.

2. What is my contribution towards the team's deliveries? How can I help my team do better next sprint?

I have had a lot to do this week with my bachelor thesis so I have not been able to do much this week. I will step up and do a lot of work in the coming sprints to make up for it. I did however do one user story and helped with the team reflection and the sprint planning.

3. Changes/improvements from last week's reflection?

I have become better at both typescript and git. I still have a long way to go in order to become good and do more advanced stuff but I'm on my way now at least. Not much has changed since last week.
