1. What do I want to learn or understand better? Consider e.g. teamwork, Scrum, agile processes, technologies etc?

Same as the last few weeks. I still want to learn typescript better. After programming this week I feel like I have learned a lot but it also become even more evident that I have a lot to learn. I feel like the backend side of typescript is alright but I'm completely lost in the frontend. This is something I want to learn more about. I think the programming went a lot better this few than previously. I still have to ask the more experienced about something but I feel like I don't have to ask as much anymore.

2. What is my contribution towards the team's deliveries? How can I help my team do better next sprint?

I have had a lot to do this week with my bachelor's thesis. The deadline for the thesis was on Wednesday so the week was divided into one block of bachelor thesis and one block of programming. I think this benefited me as I could focus on one thing at a time and not have my mind drifting away. This week I did some programming and wrote the team reflection.

3. Changes/improvements from last week's reflection?

I have become better at both typescript and git. I still have a long way to go in order to become good and do more advanced stuff but I'm on my way now at least. Not much has changed since last week.
