1. What do I want to learn or understand better? Consider e.g. teamwork, Scrum, agile processes, technologies etc?

I still want to learn typescript better. After programming this week I feel like I have learned a lot but it also become even more evident that I have a lot to learn. I also want to learn more git because I still feel a bit nervous whenever I'm going to use it.

2. What is my contribution towards the team's deliveries? How can I help my team do better next sprint?

I did a user story, did the team reflection, and participated in the different meetings we had. I hope I can keep contributing to the programming even though I'm one of the worst in the group. I believe I can help the group focus on the most important tasks and with the team reflections.

3. Changes/improvements from last week's reflection?

I have become better at both typescript and git. I still have a long way to go in order to become good and do more advanced stuff but I'm on my way now at least.
